

EHR data migration success

795k data elements in 50 days

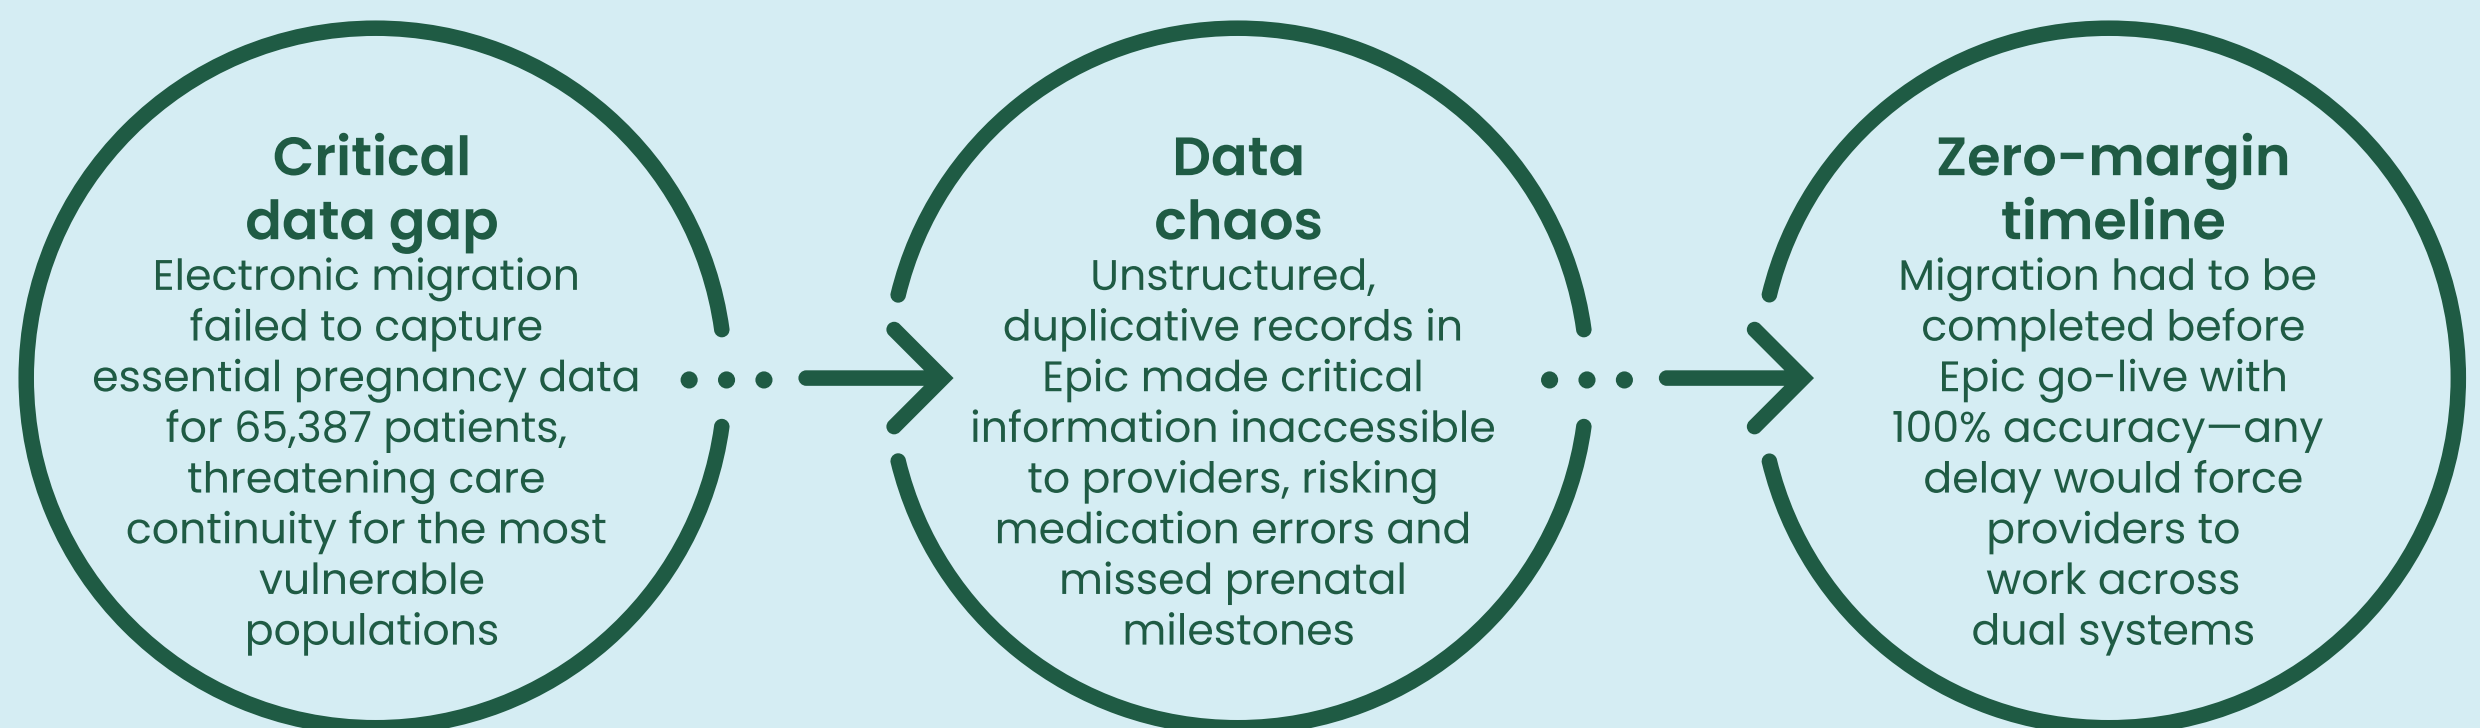

Client overview

A multi-specialty healthcare leader based in New York, serving over 1.6 million patients across numerous counties. With 2,100+ providers delivering primary care, specialty care, urgent care, and virtual consultations, the organization required seamless data migration to maintain their commitment to accessible, accountable care.

When a New York healthcare leader serving 1.6 million patients needed to migrate 65,000+ pregnancy records from NextGen to Epic, **IKS Migrate delivered flawlessly—completing 795K data elements** in just 50 days with **98–99% accuracy, saving \$226K.**

Challenges

The client faced a critical deadline with 65,000+ patient records at risk:

Our approach

IKS Health deployed a precision manual migration strategy:

Intelligent prioritization	Precision mapping	Real-time validation	Phased execution
Triaged active pregnancy patients first, ensuring zero care disruption during the transition period	Transformed unstructured data into searchable, structured fields (medications, allergies, problems, histories), eliminating the "data dump" problem	Deployed dual-EHR verification to achieve 98–99% accuracy while eliminating all duplicate records	Week 1–3: 34,431 active pregnancy patients (completed Feb 10–28) Week 4–7: 30,956 past pregnancy patients (completed Feb 28–Apr 30) Continuous quality checks throughout all phases

Impact

795,000

data elements processed

50-day

completion

delivery

Results that matter

Quality assurance

Our rigorous validation process achieved consolidated data accuracy of **98-99%**, **ensuring zero missed appointments** due to data issues throughout the migration.

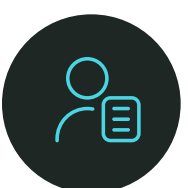

Data integrity

With 100% TAT adherence for all migrations and complete elimination of duplicate records, we **delivered data integrity that exceeded industry standards.**

Risk mitigation

By prioritizing accurate data migration, **we prevented potential medication errors and protected prenatal care continuity.** Our approach ensured full compliance while maintaining a complete audit trail for all migrations, providing both clinical safety and regulatory peace of mind.

Provider efficiency

By ensuring data was mapped to structured fields, **providers could quickly access relevant patient information, reducing time spent searching for critical data and enhancing clinical workflows.**
